

PROWATS - Pernod Ricard's Program on Water Stewardship - 2020

CII- Triveni Water Institute (CII-TWI), working exclusively on water and wastewater has partnered with Pernod Ricard India Private Limited (PRIPL) for providing a Programmatic Framework for institutionalizing a Water Stewardship Roadmap to enable water conservation and efficient water resource usage across its operations in India (both own plants and co-packers).

The study focused on 11 selected PRIPL plants across India for detailed water resource assessment at the plant watershed level that can deeper the understanding of water risks faced by the concerned plant. The study helped in identification of appropriate water management and conservation strategies to minimize the risks to operations both from within the plant and outside the plant (plant watershed).

CII's WATSCAN Tool was applied for mapping water resources for all 11 plants under which a comprehensive hydrological and groundwater evaluation were undertaken based on various datasets prepared and configured to come up with understanding of water availability in the watershed. Based on the study outcomes water security framework was prepared to arrive at the rating of various plants in terms of water security and vulnerability. An intervention matrix was prepared to provide an implementation plan for improving water scenario for the respective plants.
